

P & F Equipment was established in 1983 and is locally owned and operated. We manufacture our own product for the embroidery industry. Since then we have grown into a full service machine and fab shop as well as continuing to manufacture our own product line.

All of our products are precision made from our CNC equipment. We offer a complete line of fabrication products and services, no job is too small ~ we will produce one part or mill the complete job.

Our machining, routing, & vinyl cutting software is industry standard CAD based. We can run parts from your CAD compatible file or we can create a new drawing based on your sketches and/or ideas.
